

HP4™
HOOK POTENTIAL

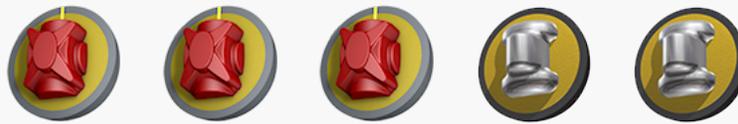

NO RULES™

CORE.

Ever wonder what would happen if you took the dominant traits of proven cores and mixed and mashed them all together? Well then look no further. We took differential stability throughout the lane, consistent axis migration and defined RG bands to create our most dynamic and continuous core to date. Can you say dynamic? I knew you could.

Chaotic™ Core

	16lb	15lb	14lb	13lb	12lb
RG VALUE:	2.50	2.51	2.55	2.57	2.59
RG DIFFERENTIAL:	0.052	0.053	0.048	0.032	0.029
PSA:	0.017	0.018	0.016	0.010	0.008

COVER.

You want traction? You got it! The brand new Micro DNA™ Solid Reactive cover is our strongest solid cover to date. Developed from the ever so popular MicroBite™ Solid from yesteryear, we took that very same technology and increased the nanotechnology by 5% taking traction to the next level!

Factory Finish: *2000-grit pad*

Flare Potential: *High*

Coverstock: *Micro DNA™ Solid Reactive*

Color: *Neon Green / Neon Orange / Black*

Hardness: *73-75 on D-Scale*

CONDITION.

The No Rules comes out of the box with a 2000-grit pad finish. But don't be scared if you need to add more surface, add it, it will dig in that much more. If out of the box it is too aggressive, well then go ahead and sand it up to a higher grit or even polish it if you have to. This ball is versatile and no matter how you finish it, it will roll heavy and continuous every time!

Lane Condition - **Medium/Heavy oil to Heavy oil**

The ball path represents Roto Grip's bowling ball tester. Ask your pro shop professional how this ball will work for you.

HOW TO KEEP YOUR NEW BALL REACTING STRONG

We strongly believe that preventative maintenance is the key to a cover's longevity.

WHY? The ball's ability to absorb lane oil into the pores helps to keep a dry ball surface in contact with the lane for more friction, creating added hook. Over a period of time, the bowling ball's performance will slowly deteriorate due to oil absorption and dirt build up on the ball's surface.

In addition to using a clean and dry Roto Grip Shammy in competition, we highly recommend that a bowling ball cleaner be used immediately afterward to further clean the ball's cover. If a ball is used and then put away without cleaning, the oil and dirt will have a greater chance to be absorbed deeper into the cover.

We hear time and time again from people who have lost hook in their equipment and swear they clean it on a regular basis. Only when the question is asked about when they clean their equipment does the real problem come to light; cleaning a ball just before use removes only a very fine layer while the deeper trapped oil and dirt still remain from your last session. Below is our recommended procedure to maintain your ball's performance:

1. Use a clean, dry Roto Grip Shammy during competition
2. At the end of the session, use Storm Reacta Foam™ and spray liberally over the entire surface of the ball
3. Rub your hands over the surface of the ball in a scrubbing motion for 15-20 seconds
4. Towel off the ball until dry

This process will assist the degreasing agent in the cleaner to draw oil and dirt out of the pores; the hand-action helps break down the oil and dirt, making it easier to be removed with a towel.

Ball Maintenance Checklist

WHEN	POLISHED BALLS	DULL BALLS
<i>Between Shots</i>	<i>Wipe with Roto Grip Shammy</i>	<i>Wipe with Roto Grip Shammy</i>
<i>After Bowling</i>	<i>Clean with Storm Reacta Foam</i>	<i>Clean with Storm Reacta Foam</i>
<i>Every 10 Games</i>	<i>Re-polish surface with Storm Reacta Shine™</i>	<i>Scuff surface with Abralon® pad to maintain original reaction</i>
<i>Every 30 Games</i>	<i>Scuff surface with Abralon and re-polish with Storm Reacta Shine</i>	
<i>Every 60 Games</i>	<i>Ball is due for full resurface process</i>
