

HP2
HOOK POTENTIAL

WRECK-IT™

CORE.

Most commonly known to be the heart and soul of the Wrecker™, the Neutron™ Core will give you the length and strong down-lane motion you should expect from a 2.55 RG / .042 differential shape. Hands down the best performing core for the money!

Neutron™ Core

	16lb	15lb	14lb	13lb	12lb	11lb	10lb
RG VALUE:	2.56	2.55	2.59	2.63	2.65	2.73	2.77
RG DIFFERENTIAL:	0.046	0.042	0.044	0.009	0.011	0.012	0.015

COVER.

Coming out of the box to you at a 3000-grit pad finish this hybrid cover takes versatility to a new level. Even with the surface out of the box this cover still glides down the lane but provides enough traction to combat more oil. And don't worry, when we say versatile it is just that, sand it more for heavier oil or shine it up for less oil.

Factory Finish: *3000-grit pad*

Flare Potential: *Medium*

Coverstock: *Psyched™ Hybrid Reactive*

Color: *Gold & White Pearl / Black Solid*

Hardness: *73-75 on D-Scale*

CONDITION.

Best explanation of the new Wreck-It.... Think Wrecker on PED's. More overall reaction and more overall versatility than its predecessor still in that same price point. Most people think we are crazy for providing this much reaction for such a low price. All we can say is... You are welcome!

Lane Condition - **Medium to Medium/Light Oil**

The ball path represents Roto Grip's bowling ball tester. Ask your pro shop professional how this ball will work for you.

HOW TO KEEP YOUR NEW BALL REACTING STRONG

We strongly believe that preventative maintenance is the key to a cover's longevity.

WHY? The ball's ability to absorb lane oil into the pores helps to keep a dry ball surface in contact with the lane for more friction, creating added hook. Over a period of time, the bowling ball's performance will slowly deteriorate due to oil absorption and dirt build up on the ball's surface.

In addition to using a clean and dry Roto Grip Shammy in competition, we highly recommend that a bowling ball cleaner be used immediately afterward to further clean the ball's cover. If a ball is used and then put away without cleaning, the oil and dirt will have a greater chance to be absorbed deeper into the cover.

We hear time and time again from people who have lost hook in their equipment and swear they clean it on a regular basis. Only when the question is asked about when they clean their equipment does the real problem come to light; cleaning a ball just before use removes only a very fine layer while the deeper trapped oil and dirt still remain from your last session. Below is our recommended procedure to maintain your ball's performance:

1. Use a clean, dry Roto Grip Shammy during competition
2. At the end of the session, use Storm Reacta Foam™ and spray liberally over the entire surface of the ball
3. Rub your hands over the surface of the ball in a scrubbing motion for 15-20 seconds
4. Towel off the ball until dry

This process will assist the degreasing agent in the cleaner to draw oil and dirt out of the pores; the hand-action helps break down the oil and dirt, making it easier to be removed with a towel.

Ball Maintenance Checklist

WHEN	POLISHED BALLS	DULL BALLS
<i>Between Shots</i>	<i>Wipe with Roto Grip Shammy</i>	<i>Wipe with Roto Grip Shammy</i>
<i>After Bowling</i>	<i>Clean with Storm Reacta Foam</i>	<i>Clean with Storm Reacta Foam</i>
<i>Every 10 Games</i>	<i>Re-polish surface with Storm Reacta Shine™</i>	<i>Scuff surface with Abralon® pad to maintain original reaction</i>
<i>Every 30 Games</i>	<i>Scuff surface with Abralon and re-polish with Storm Reacta Shine</i>	
<i>Every 60 Games</i>	<i>Ball is due for full resurface process</i>
