GUTS.

SAME CORE, SAME DEFIANCE.

If my mentor has taught me one thing, it's that deflance starts from within. Featuring the same technological advancement found in the Deflant^M, the unique elliptical shape of my Paragam ^M core defines predictability of asis migration and allows you to perfectly match up your ball reaction to the conditions at hand. The pins wont even know what hit em.

GRIT.

THE RITE GETS A SHINE

You may have never associated pearls with destruction before, but I'm about to change all that. My MicroBite^{My} pearl reactive coverstock uses extremely small structured additives to help smooth the transitions while maintaining entry angle at the packet. This helps you create better pin action while reducing oil sensitivity that can send your ball through the break point. Powerful and smooth, like a beteful py Don Juan.

Factory Finish: 1500-grit Polished Flare Potential: 7+ Inches Coverstock: MicroBite Pearl Reactive Hardness: 73-75 on D-Scale

GRIME.

LESS OIL DOESN'T MEAN LESS POWER.

Confident. Cocky. Call it what you want, but I'm telling you right now. I am the ideal complement to the original Beriant. I provide the perfect complement by the original Beriant. I provide the perfect complement of the original Beriant is provided to the complement of the complem

DEFIANT EDGE

GUTS.

SAME CORE. SAME DEFIANCE.

If my mentor has taught me one thing, it's that defiance starts from within. Featuring the same technological advancement found in the Defiant Methounique elliptical shape of my Paragon Moore defines predictability of axis migration and allows you to perfectly match up your ball reaction to the conditions at hand. The pins won't even know what hit'em.

GRIT.

THE BITE GETS A SHINE.

You may have never associated pearls with destruction before, but I'm about to change all that. My MicroBite^{NM} pearl reactive coverstock uses extremely small structured additives to help smooth the transitions while maintaining entry angle at the pocket. This helps you create better pin action while reducing oil sensitivity that can send your ball through the break point. Powerful and smooth, like a beefed up Dio Juan.

Factory Finish: 1500-grit Polished Flare Potential: 7+ Inches Coverstock: MicroBite Pearl Reactive Hardness: 73-75 on D-Scale

GRIME.

LESS OIL DOESN'T MEAN LESS POWER.

Confident. Cocky. Call it what you want, but I'm telling you right now, I am the ideal complement to the original Beriant. I provide the perfect control with the skid-hook-roll, even on medium-heavy oil. Separate, we're still the baddest to even hit the lanes. But tooether, we're unstonoable.
